

AI-Assisted Vocal Screening Report

Report Reference:	VV-72d6d806	Screening Date:	2026-06-11 01:52:56 UTC
System Model ID:	VitaVoice-SVC-Ensemble-v2	Environment Noise:	Calibrated (Normal)

Estimated Risk Score

59%
BORDERLINE /
MODERATE RISK

Low Certainty

Your vocal profile has been analyzed using standard acoustic biomarkers and deep speech foundation embeddings. Jitter, shimmer, and signal stability factors indicate a vocal pattern that correlates with minor speech irregularities, which can be indicative of vocal fatigue, temporary throat irritation, or early dysphonia stages. AI explainability (SHAP) suggests the primary vocal drivers were MFCC_2 (decreases risk), Formant F2 Frequency (decreases risk), Formant F3 Frequency (decreases risk). This assessment is an automated pre-clinical screening aid. Please refer to recommendations below.

Acoustic Biomarker Analysis

Biomarker	Value	Threshold	Status	Clinical Interpretation
Average Pitch (F0)	206.5 Hz	85-255 Hz	Within Range	Vocal cord oscillation speed.
Pitch Jitter (Local)	71.837%	< 1.04%	Elevated	Cycle-to-cycle frequency variations.
Amplitude Shimmer	81.431%	< 3.8%	Elevated	Cycle-to-cycle amplitude variations.
Harmonics-to-Noise (HNR)	10.4 dB	> 20.0 dB	Low (Breathy)	Vocal harmonics vs noise ratio.

- Recommended Action Plan:**
- Rest your vocal folds, hydrate well, and avoid environmental allergens.
 - Retest in 24-48 hours in a quiet environment to eliminate temporary noise biases.
 - Monitor for other neuromotor symptoms (e.g. resting tremor, stiffness).

Responsible AI Screening Notice: VitaVoice is an AI-powered pre-clinical voice pathology screening aid and is intended for educational, wellness tracking, and research purposes only. It is not an FDA-cleared diagnostic medical device. It does not provide medical diagnoses or treatment plans. Vocal irregularities can be caused by transient factors such as common cold, dehydration, allergies, or vocal strain. Always consult a qualified physician or specialist for definitive medical diagnoses and neurological evaluations.
